

ABSTRACT OF THE DISCLOSURE

1
2 A stabilizer to hold two objects in position. It includes a
3 pair of hook-like retainers joined together by a flexible stiffly
4 springy joinder. A stub extending from one of the retainers
5 carries a cross-bar that can be pulled by two fingers to pull one
6 retainer over an object, and can be stretched to fit the other
7 retainer over the other object, the joinder tending to return to
8 a rest position to stabilize the assembled objects and
9 stabilizer.
